

WS-050 – Migrating Application Workloads to Azure

**Microsoft Official Course
(MOC)**

Course

**WS-050T00-A: Migrating
Application Workloads to
Azure**

(2 days)

About this Course:

- 2 Days
- Instructor-led training
- Intermediate

- English

This workshop teaches IT Professionals how to migrate existing on-premises workloads and assets to the cloud, specifically to the Microsoft Azure platform. Students learn how to assess and evaluate an existing on-premises environment in preparation for a cloud migration. Students also learn how to monitor and optimize their Azure-based workloads to maximize return on investment (ROI), and use Azure services to protect and manage your virtual machines, applications, and data.

Course Goals/Skills Gained:

- Identify the tools and services specific to each phase of the migration.
- Identify the tools and services specific to each phase of the migration
- Discover and assess on-premises workloads for migration to Azure
- Obtain deeper profiling of an environment using app dependency mapping and assessment customizations
- Perform an end-to-end migration of on-premises workloads to Azure using Azure Migrate
- Replicate data from an on-premises datacenter to Azure or to a secondary site
- Migrate data from existing data sources to Azure data platforms using the Database Migration Service
- Secure and manage migrated workloads using Azure Security Center, Azure Backup, and Log Analytics
- Ensure an effective business continuity strategy that includes high availability, disaster recovery
- Back up and protect Azure IaaS virtual machines from any

location using the Azure Backup Service

- Define a recovery plan to ensure virtual machines fail over properly before running a full failover
-

Audience:

- This workshop is for IT Administrators and staff who need to plan, implement and manage migrations of on-premises resources to Azure, or to replicate Azure virtual machines to other Azure locations. They take business requests from workload owners to migrate workloads to the cloud in order to take advantage of the benefits that a cloud-enabled strategy provides over a traditional datacenter approach. This role requires communicating and coordinating with different individuals within an organization's IT department and business groups, as well as vendors.
-

Course format

Attendance Course

Online

Course language: Bulgarian (English is available as an option)

Teaching Materials: in electronic format (Teaching materials

are in English), included in the price with unlimited access. Laboratory environment: each student has his own lab environment where the exercises take place, part of the course.

Prerequisites:

- IT Administrators start this role with experience on operating systems, virtualization, cloud infrastructure, storage structures, and networking. In addition, IT administrators should have experience or equivalent knowledge in administering an IaaS Azure infrastructure.
- Understanding of on-premises virtualization technologies, including: VMs, virtual networking, and virtual hard disks.
- Understanding of network configuration, including TCP/IP, Domain Name System (DNS), virtual private networks (VPNs), firewalls, and encryption technologies.
- Understanding of Active

Directory concepts, including domains, forests, domain controllers, replication, Kerberos protocol, and Lightweight Directory Access Protocol (LDAP).

- Understanding of resilience and disaster recovery, including backup and restore operations.
- Familiarity with using Azure, including the Azure portal, Cloud Shell, Azure PowerShell, CLI and ARM template.
- Understanding of Azure Active Directory and cloud identity management.
- Understanding of management of subscriptions, users, groups, and billing, and Azure policies.

The course prepares for the following certification levels

· Microsoft Windows Server 2019 / Azure Administrator

- You can be certified in our test center with a voucher with a discount on the price of the exam.
